Exp.No.15

Analysis of various types of Server

Aim:

To analyze the web server log files using the webalizer tool and study various server statistics such as number of requests, visitors, transferred data, url and response status codes.

Algorithm:

* Start the Webalizer application
* Install and configure Webalizer on the system
* Locate the web server access log file
* configure webalizer with the required log-file path and output directory.
* Run webalizer on the selected log file
* Webalizer reads and analyzes the server log entries.
* It generates statistics such as
  * Number of visits
  * Number of requests
  * pages accessed
  * Data transferred
  * HTTP response code
  * Referring sites
  * Operating system and browsers.

Input:-
Web server access log files containing information such as:-
- Client IP
- Date and time
- Requested URL
- HTTP Method
- HTTP Status code
- Bytes Transferred
- Referrer
- User Agent

Example input.
access.log

Output:-
Webalizer generates an HTML-based statistical report containing
Webalizer Statistics
- Total Requests: 1250
- Total Visits : 480
- Total pages : 920
- Total Bytes : 15.4 MB
- Successful Request : 1140
- 404 Errors : 45

* open the generated HTML report in a web browser
* Analyze the server activity using the generated graph and tables
* Repeat the analysis for different server log files if required.

Result:
Thus, the Webalizer tool was used successfully to analyze web server log files, and various server statistics such as request, visitors, pages, bandwidth usage and HTTP responses code were obtained.
