

Here you can compare the different pinouts between a straight thru and x-over cable. The Transmit and Receive pins are also shown

# Exp 2 Different types of Network Cables

a) understand different types of network cable

Different type of cables used in networking are

1. Unshielded Twisted (UTP) cables
2. Shielded Twisted pair (STP) cables
3. Coxial Cable
4. Fibre optic cables.

UTP:

| Category | Max Data Transmission | Use |
|---|---|---|
| category 3 | 10 bs | 10 Base - T Ethernet |
| category 5 | upto 100 mbps | Fast Ethernet, Gigabit Ethernet |
| Category 5e | 1Gbps | fast Ethernet. Gigabit Ethernet. |

STP

| Category | 10 Gbps | Gigabit Ethernet 10G Ethernet (55m) Widely used in data centrs |
|---|---|---|

b) Make your own Ethernet cross Cable

Tools and parts needed:

* CAT5 / CAT 5e
* Crimping tool
* Tool RJ45 connectors
* Any shields

Step 1: To start construction of the device begin by threading shields onto the cables

Step 2: Next, strip approx 1.5cm of cable shielding from both ends the crimpy tools round area to complete this task.

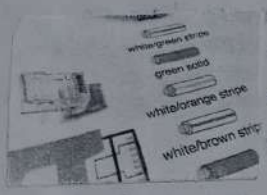

Step 3: The four wire pairs and arrange them according to A and B.

Step 4: Straighten and trim the wire them insert them into the RJ45 connector.

Step 5: From the wing fully into the RJ45 ping.

Step 6: Insert the plug into the climbing tool crimp it

Step 7: Repeat the same process on the other end using B for over and

for straight through cable.

Result:

Thus different typs of network cable used in networking are studied.
