Ex.No. 8 (a) Nmap Live Host Discovery using ARP ICMP & TCP and UDP

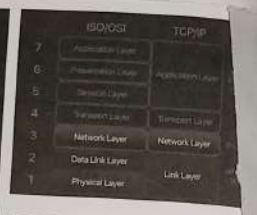

Aim:-

To discover live host using Nmap scans such as ARP, ICMP, TCP and UDP on the try Hack platform.

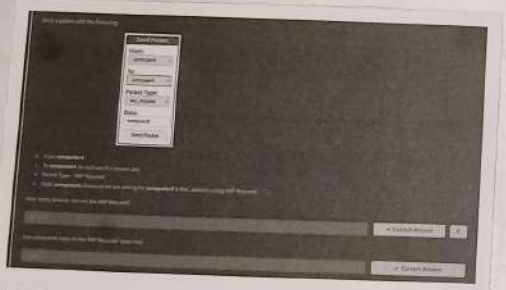

Algorithm:

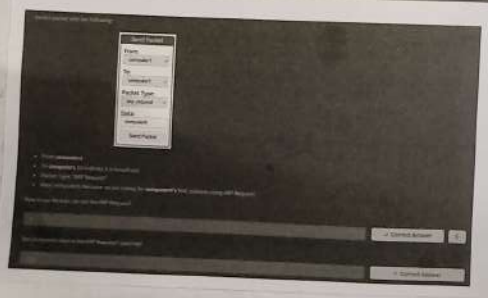

* Open the try hack platform and access the Nmap live host Discovery tool.
* Study the concept of live host discovery before performing network scanning.
* Start with an ARP scan to identify live hosts in the local network
* Observe the Arp request and respond from the target hosts
* Perform an Icmp scan to check whether the target system respond to Icmp request.
* Record the live host identified by Nmap and Study the scan result.

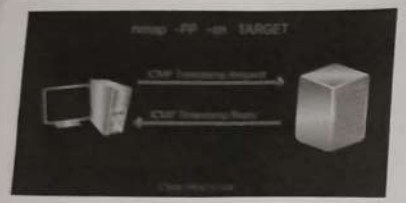

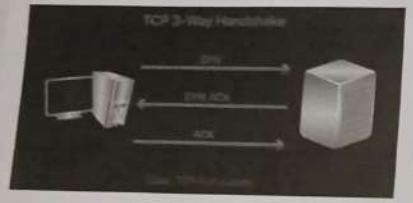

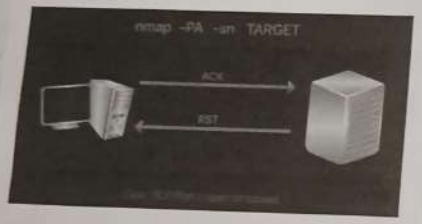

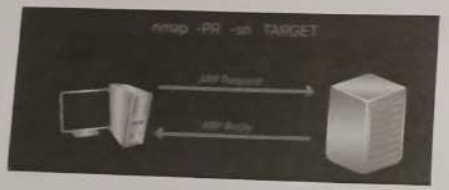

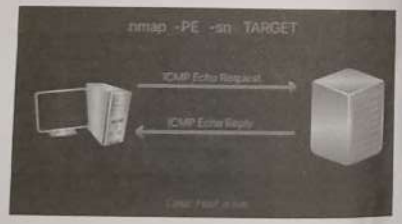

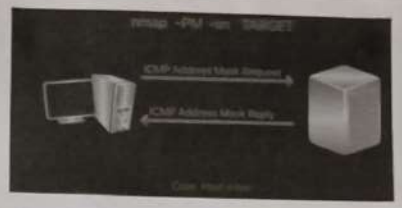

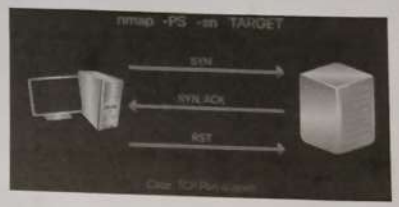

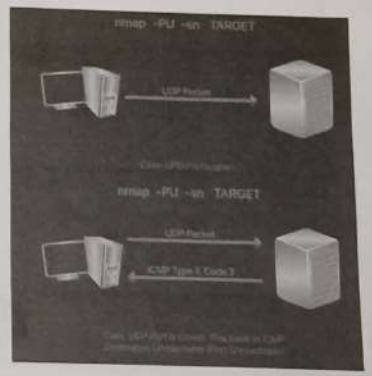

Result: Thus the live hosts were successfully discovered using ARP, ICMP, TCP, and UDP scanning techniques in Nmap.

Ex: 8 b

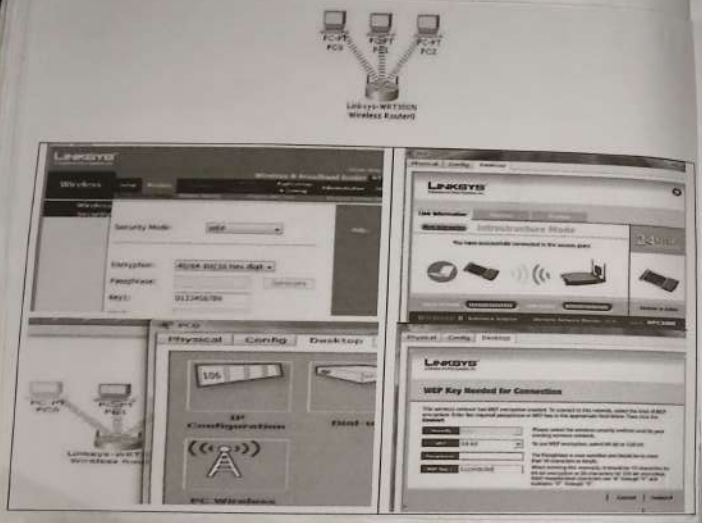

configuration of wireless lan using cisco packet tracker.

Aim:

To design and configure a wireless lan using cisco packet tracer with three pcs connected to a Linksys wireless Routes

Algorithm:

* Open cisco packet tracer and create new workflow.
* place linksys wireless router and 3 pcs
* configures the routes with the required network settings
* Set the wireless SSID as Mother Network
* configure WEP security for the wireless network.
* Repat the same configuration for the other two pcs
* Test communication between the connected.

Result:

Thus, the wireless LAN was successfully configured using cisco Packet tracer with three pcs connected to the linksys.
